

Friend --

We are excited to host the **1st International Symposium on Cultured Meat**, presented by New Harvest, Maastricht University, and Brightlands Maastricht Health Campus on **October 18-20, 2015 in Maastricht, the Netherlands**.

The production of meat through tissue culture could have immense effects in reducing the environmental impact of our agriculture system, minimizing threats to public health, addressing issues of animal welfare, and providing food security.

This symposium represents the founding of a scientific community dedicated to a pursuit that can address some of our most pressing global problems. The science behind this goal is highly multidisciplinary. We are bringing together biotechnologists, engineers, food technologists and consumer acceptance experts to discuss scientific advancements and address the gaps in our knowledge and experience.

Join us as we cultivate this highly impactful scientific community!

Topics include:

- Large scale cell production
- Biomaterials
- Skeletal muscle cell biology
- Food technology
- 3D tissue manufacturing
- Food behavioural science

[Register and submit abstracts \(before August 31st\) here.](#)

See you in Maastricht!
